ZI60_000005_000 \$AUTH32 authorisation control & misc

This service pack fixes the following problems and forms part of a set which introduces a new and powerful tool for authorisation control to Global 3000.

Stock revaluation [D16788]

The message displayed if nothing is found in the selected range has been changed from "No products in selected range " to "No stocked products in selected range".

Adjust Stock Levels [D16763]

Stop 25507 occurs when adjusting stock levels for a stock take that has a product range starting with a non-stocked product.

\$AUTH32 authorisation control [16647]

The user authorisation vetting system provided by \$AUTH32 allows you to set up a table of authorised users with associated passwords and authorisation codes, who are allowed access (or restricted access) to Global System Manager and applications containing Authorisation Point restrictions.

This GSP is part of the following Group

ZI60_000007_000 Confirm Requisition Receipt renamed.

This service pack fixes the following problems:-

Sales Order Processing [GX16764]

If the system parameter Customer delivery confirmation required? is set, the user must record that the customer has confirmed that the order has been delivered before the invoice can be printed. A window

entitled Confirm deliveries is provided to do this, and delivery notes which require this confirmation are listed in this window when they are printed for the user to mark those for which confirmation has been received.

The problem is that if an order is unconfirmed or unpicked it still appears in the Confirm Deliveries window.

This service pack also renames the above function as Customer Receipt Confirmation, or Receipt Confirmation for short, to avoid any confusion with the Despatch Confirm function, which records that stock has been issued to an order and General Ledger postings made. Unqualified references to confirmed orders or lines throughout the system always refer to Despatch Confirmation.

A further ramification is that the Confirm Requisition Receipt function has been renamed Complete Requisition.

This GSP is part of the following Group

| | |
|-----------------|--|
| ZI60_000013_000 | Enhancement to allow product selection by barcode. |
|-----------------|--|

Barcode Integration [GX16613]

This service pack contains an enhancement to Global 3000 distribution software which allows product code entry/selection to be made by scanning (or typing) a product s barcode.

The changes are:

Product maintenance has been updated so that as part of creating or maintaining a product a 40 character barcode can be specified.

Product code entry/selection has been updated to check to see if a barcode has been scanned (or typed) instead of a product code; it searches the product records for a product with a matching barcode and automatically selects it. Product code entry/selection can be made by scanning (or typing) a product s barcode at the product code prompts in the application functions:-

Stock Control Transaction Entry,

Stock Control Stock Take,
 Stock Requisition Entry,
 Purchase Order Entry,
 Purchase Invoice Input (the addition of services and extras),
 Purchase Order Processing Supplier/Product Maintenance,
 Sales Order Processing Transaction Desktop,
 Sales Order Entry,
 Manufacturer Works Order Entry,
 Product Enquiries,
 The standard product search.

Please note: Some barcode scanners supply the scanned barcode in upper or lower case depending on the state of <Caps Lock> key, to combat this barcodes will be held on file in upper case, and the applications always convert the scanned barcode into upper case before attempting to search for products with matching barcodes.

Please also note: Barcode scanners connected via the RS-232 serial port are not supported.

This GSP has the following Pre-requisites -

ZI 60 13

This GSP is part of the following Group

ZI60_000016_000 Various enhancements to SOP and POP

Various enhancements to SOP and POPPurchase Order Enquiries [D17507]

In some cases whilst enquiring upon purchase order lines, pressing the 'Stock' button shows the purchase order header details rather than the stock details.

Manufactured Goods Enquiry [D17494]

A new "Manufactured Products" option is now available at the product type selection menu that appears after selecting Stock Enquiries. This option restricts the enquiry to manufacturable products only.

Supplier Price Lists in POP [D17338]

This enhancement introduces the ability to define a supplier price list for products ordered through POP or Landed Costs. A new "POP Price Lists" parameter is available to configure the way pop price lists are used.

A new "Price List" sub-menu contains all the price list maintenance and report functions.

Increased pricing accuracy in POP [D17337]

This enhancement introduces the ability to define the pricing accuracy to be used on all products within a selected product group. A unit price can now be defined as having between two and six decimal places. It should be noted that the total line values (total value posted to GL and CL) is still limited to the number of decimal places that are valid for the currency of the order.

The increased pricing accuracy is used in POP price lists, last quoted cost and last invoiced cost.

S.O.P. and P.O.P. Posting Options [gx17390]

This service pack introduces a new parameter screen to P.O.P., the new parameters enable you to control the narrative and comment lines used on Creditors Ledger transactions, General Ledger Analysis (of Creditors Ledger transactions) and General Ledger transactions (for cost variance when posted to the stock value account) posted from P.O.P. Invoice Input.

It also enhances the Debtors Ledger Narrative window within S.O.P. Invoicing parameters. This window has been re-titled Posting Options and enables you to control the narrative and comment lines used on Debtors Ledger transactions, General Ledger Analysis (of Debtors Ledger transactions) and General Ledger transactions posted from S.O.P. Invoice Print.

ZI60_000036_000 Update to Stocktake Report.

Stocktake Report [GX18394]

This service pack introduces a new format option to the Stocktake Report. The new option allows the stocktake report to be either printed (in standard or PDF format depending on the selection in the report options window) or exported in CSV format.

When the report is exported, a CSV file is created which consists of a single line of column headings followed by the stocktake report details; (page headings are not exported). Each line is terminated with either #0D or #0D0A depending on the operating system.

Please note, printing reports in PDF format requires an up-to-date copy of either PDF_In_The_Box.dll or All_In_The_Box.dll to be present on each GX client used to perform the document generation.

Please see the accompanying service pack note for further details.

ZI60_000052_000 New 'Where Used' Report.

Where Used Report [gx18426]

This service pack introduces a new function named Where Used Report which is available from the Product Maintenance Menu within Sales Order Processing, Stock Control, Purchase Order Processing and Manufacturer.

The new report is only available in PDF format and shows details of which product s accessory lists and assembly bills a product appears in. Products included in the report can be selected by location, product group and/or product range.

Please see the note accompanying this service pack for full details of the new feature.

Please note, Delivery of documents via email and printing documents in PDF format requires an up-to-date copy of either PDF_In_The_Box or All_In_The_Box to be present on each GX client used to perform the document generation.

Please copy SO-Menus, PO-Menus, MG-Menus and ST-Menus from your program unit (\$P) to your data unit (STD or MGD) after applying this Service Pack. This step is not required if service pack ZM60_000080_000 has been applied and unit 'G3M' has been assigned to your program unit (\$P).

ZI60_000055_000 Multiple Bin Handling

Multiple Bin Handling [gx10667]

Please note, the features described in the following text (and accompanying service pack note) are not yet available, they are currently undergoing testing and quality control and will be enabled in a later service pack.

This service pack introduces the ability to operate multiple bins per stock location.

Please note, the following features are only available at sites configured to use the extension database (see service pack ZM60_000259_000 for details).

The distribution options within system parameters have been updated to include a new option labelled Multiple Bin Handling . This will provide configuration options for controlling the use of multiple bins throughout the distribution modules.

Stock transactions (issues, receipts, returns, adjustments and transfers) have been updated to take in to account bin numbers for all stocked products (not just those that are batch tracked).

A new button labelled Zones has been added to location maintenance. Zones are used to sub-divide stock locations. For example in to aisles. Stocktakes can be limited to products held within bins situated at specific zones of a stock location.

A new option labelled Bin Maintenance has been added to the system maintenance menu within Stock Control. This allows bins to be created, updated and their contents to be manipulated.

A new option labelled Bin Enquiries has been added to the product enquiry menu. This allows enquiries upon bins, their contents and bin movements.

A new option labelled Bin Reporting has been added to the Reporting

menu (within Stock Control). Note, this report is only available in PDF format.

All places within Stock Control, SOP, POP and Manufacturer that issue, receive, adjust or transfer stock have been updated to update quantities recorded within bins where applicable.

Please see the accompanying service pack note for further details.

Please note, printing documents in PDF format requires an up-to-date copy of either PDF_In-The-Box or All_In-The-Box to be present on each GX client used to perform the document generation.

Please copy ST-Menus from your program unit (\$P) to your data unit (STD) after applying this Service Pack. This step is not required if service pack ZM60_000080_000 has been applied and unit 'G3M' has been assigned to your program unit (\$P).

ZI60_000056_000 Multiple Bin Handling.

Multiple Bin Handling [GX10667]

This service pack enables the ability to operate multiple bins per stock location (initially released in service pack ZM60_000339_000).

Please note, multiple bin handling is only available at sites configured to use the extension database (see service pack ZM60_000259_000 for details).

Please see the accompanying service pack note for further details.

ZI60_000057_000 Multiple Bin Handling - Bin Reporting.

Bin Reporting [D18836/GX10667]

This service pack enables the Bin Reporting option which is

available from the Reporting Menu within Stock Control.

Bin reporting is only available in systems configured to use multiple bin handling. It provides the ability to produce reports (in PDF format) which show bin details and bin movements.

The new report is only available in PDF format and shows details of which product s accessory lists and assembly bills a product appears in. Products included in the report can be selected by location, product group and/or product range.

Please note, Delivery of documents via email and printing documents in PDF format requires an up-to-date copy of either PDF_In-The-Box or All_In_The_Box to be present on each GX client used to perform the document generation.

Please see the accompanying service pack note for further details.

ZI60_000058_000 Stock Queue - Various Fixes.

Stock Queue Various Fixes [D18866/D18867/D18868]

If an SOP order line has a blank required date then this indicates that the line is required A.S.A.P., for queued products with the allocation method set to Reserve/Allocate/Request this is being ignored and if there are purchase orders available the stock is being reserved even if there is free stock available for allocation.

The stock forecast enquiry has been updated for queued products; it now includes the reserved quantity for purchase orders.

The following places have been updated to include a new button which gives access to the stock forecast enquiry (for the product/location).

SOP manual allocation,
SOP supply and demand windows,
SOP stock queue entries window,
POP order entry (request browse).

ZI60_000059_000 Update to SOP Automatic Allocation.

Automatic Allocation Re-Reserve Purchase Orders [gx18878]

—

This service pack introduces a new setting within Automatic Allocation. The new setting (labelled Re-Reserve purchase orders?) only applies to queued products. When set automatic allocation checks for new purchase orders that are expected earlier than the earliest purchase order that has been reserved against; if one is found all reservations are converted to requests and the stock queue for the product is re-processed to ensure that the oldest SOP transaction lines are satisfied first. This change does not affect the queue records created by Global 3000 Manufacturer for works order lines.

This service pack also solves a problem whereby sales order entry and the SOP transaction desktop are not making reservations against incoming purchase orders correctly. This relates to products with a queue allocation method of reserve/allocate/request.

Please see the note accompanying this service pack for full details of the new feature.

ZI60_000072_000 Update to Stocktake Report.

Multiple Bin Handling [D19331/D19333]

The stock details windows in product maintenance and product enquiries have been updated to include a new field named Held In . The new field which is only available in systems configured for multiple bin handling shows the count of bins that hold the product or the actual bin number in cases where the product is held in a single bin.

In addition, if the PDF format stocktake report is printed (not in bin sequence) in systems configured for multiple bin handling it has been updated to include a new column labelled Held In (set as above).

ZI60_000075_000 Problems with Multiple Bin Handling.

Multiple Bin Handling [D19502/D19503/D19504]

This service pack solves the following problems in systems configured to allow multiple bin handling.

There is no option to add stock to a new bin whilst receiving serialised products.

Stock Transfers do not prompt for a new bin if the product is not held in any bins at the location the stock is being transferred into.

The confirmation window showing the bins in which stock has been placed should not be displayed if the option to automatically receive the stock is chosen and the product is held in a single bin.

If the bin number is manually entered (after clearing the window) in a select window it should automatically be converted to upper case.

ZI60_000084_000 Update to Multiple Bin Handling.

Multiple Bin Handling - Product Maintenance [GX19623]

A new system parameter has been added to the Multiple Bin Handling options. When the new option is enabled product maintenance forces stocked products to be held in a bin at each location it is stocked.

Please see the accompanying service pack note for further details.

In addition this service pack fixes a problem whereby if a product was added to a bin as part of stock transfer any existing stock balance was not placed in the bin. This resulted in discrepancies between the stock count and the bin count.

ZI60_000091_000 Update to SOP Transaction Desktop.

SOP Transaction Desktop [D19836]

This service pack updates the SOP transaction desktop to include two new authorisation points. The new authorisation points (SO_ALLOCAT and SO_DEALLOC) can be used to prevent individual users from allocating and deallocating stock.
