Goods Receipt Uncon	firm Receipts [G	X17248]		
This enhancement int	roduces a new op	tion labelled Unconfi	rm Receipts	

in prior to confirmation. Selecting the new Unconfirm Receipts option will, offer the user a list of confirmed receipt lines.

Selecting a receipt line to be unconfirmed will:-

Prompt the user for a Supplier Return Reason Code (if required), Reduce the stock counts (as per a write-off issue within stock control), Post reversals of the GL postings made when the Confirm Receipts option was originally selected. Please note: It is not possible to unconfirm a receipt if any of the following conditions hold true. If the receipt was confirmed before this service pack is applied, If any of the stock has been issued, If any of the stock is frozen for stock-take, If the receipt has been invoiced, If the purchase order was shipped via Landed Costs, If the product is serialised and any of the serial numbers have been suggested on a picking list, If the product is batch tracked and any quantity from the batches receipted has been reserved, If any of the stock has been reserved or allocated via the stock queue. ZL60\_000005\_000 Various enhancements to SOP and POP

Various enhancements to SOP and POP

Purchase Order Enquiries [D17507]

In some cases whilst enquiring upon purchase order lines, pressing the 'Stock' button shows the purchase order header details rather than the stock details.

Manufactured Goods Enquiry [D17494]

A new "Manufactured Products" option is now available at the product type selection menu that appears after selecting Stock Enquiries. This option restricts the enquiry to manufacturable products only.

Supplier Price Lists in POP [D17338]

This enhancement introduces the ability to define a supplier price list for products ordered through POP or Landed Costs. A new "POP Price Lists" parameter is available to configure the way pop price lists are used.

A new "Price List" sub-menu contains all the price list maintenance and report functions.

Increased pricing accuracy in POP [D17337]

This enhancement introduces the ability to define the pricing accuracy to be used on all products within a selected product group. A unit price can now be defined as having between two and six decimal places. It should be noted that the total line values (total value posted to GL and CL) is still limited to the number of decimal places that are valid for the currency of the order.

The increased pricing accuracy is used in POP price lists, last quoted cost and last invoiced cost.

S.O.P. and P.O.P. Posting Options [gx17390]

This service pack introduces a new parameter screen to P.O.P., the new parameters enable you to control the narrative and comment lines used on Creditors Ledger transactions, General Ledger Analysis (of Creditors Ledger transactions) and General Ledger transactions (for cost variance when posted to the stock value account) posted from P.O.P. Invoice Input.

It also enhances the Debtors Ledger Narrative window within S.O.P. Invoicing parameters. This window has been re-titled Posting Options and enables you to control the narrative and comment lines used on Debtors Ledger transactions, General Ledger Analysis (of Debtors Ledger transactions) and General Ledger transactions posted from S.O.P. Invoice Print.

ZL60_000013_000 Mult	ZL60_000013_000 Multiple Bin Handling				
Multiple Bin Handling [gx10	Multiple Bin Handling [gx10667]				
Please note, the features described in the following text (and accompanying service pack note) are not yet available, they are currently undergoing testing and quality control and will be enabled in a later service pack.					
This service pack introduces the ability to operate multiple bins per stock location.					
Please note, the following features are only available at sites configured to use the extension database (see service pack ZM60_000259_000 for details).					
The distribution options within system parameters have been updated to include a new option labelled Multiple Bin Handling . This will provide configuration options for controlling the use of multiple bins throughout the distribution modules.					

Stock transactions (issues, receipts, returns, adjustments and transfers) have been updated to take in to account bin numbers for all stocked products (not just those that are batch tracked). A new button labelled Zones has been added to location maintenance. Zones are used to sub-divide stock locations. For example in to aisles. Stocktakes can be limited to products held within bins situated at specific zones of a stock location.

A new option labelled Bin Maintenance has been added to the system maintenance menu within Stock Control. This allows bins to be created, updated and their contents to be manipulated.

A new option labelled Bin Enquiries has been added to the product enquiry menu. This allows enquiries upon bins, their contents and bin movements.

A new option labelled Bin Reporting has been added to the Reporting menu (within Stock Control). Note, this report is only available in PDF format.

All places within Stock Control, SOP, POP and Manufacturer that issue, receive, adjust or transfer stock have been updated to update quantities recorded within bins where applicable.

Please see the accompanying service pack note for further details.

Please note, printing documents in PDF format requires an up-to-date copy of either PDF\_In-The-Box or All\_In\_The\_Box to be present on each GX client used to perform the document generation.

Please copy ST-Menus from your program unit (\$P) to your data unit (STD) after applying this Service Pack. This step is not required if service pack ZM60\_000080\_000 has been applied and unit 'G3M' has been assigned to your program unit (\$P).
