

ZV60\_000005\_000 Phase two release

Phase two release [x0201-x0221]

This service packs contains the phase two release of Manufacturer.  
Enhancements added include.

1. Printing of report criteria cover page is now optional.
2. New assembly bill lines types, directly keyed comment lines, one-off qty and makes qty.
3. Allow manual allocation of stock including part allocations.
4. Allow over allocation of lines.
5. Allow over issue of lines.
6. New trial kitting enquiry.
7. Additional trial kitting report options.
8. Options to drill down in works order enquiry to view issued components and finished items.
9. Allow works lines to be amended.
10. Allow works order/line comments to be updated.
11. Option to allocate stock immediately during order entry.
12. New options to define how bill explosion takes place with regard to stock position.
13. New report options added to picking list print.
14. Standard works order document layout added.
15. Can be integrated with Global 3000 General Ledger.
16. Can be integrated with Global 3000 SOP.
17. Additional WIP Valuation report options.
18. New option to allow over-completion of finished goods.
19. New QC function allows line based recording of QC instructions and results, includes QC enquiries and reports.
20. Updates to window layouts to allow Manufacturer to be used in a One-Office environment.
21. New estimated cost value maintained by order entry.
22. Works order completion can allow the user to enter labour costs during completion.
23. Upgrade from phase one Manufacturer.
24. Upgrade of assembly bills from Global 3000 BOM.

Please Note: After applying the service pack the menu file MG-Menus needs to be copied from the program unit (\$P) to the data unit (MGD).

#### Post Application Text

If you are upgrading from Global 3000 Manufacturer phase one, you must run the upgrade program MGUPGR before starting to use the new software.

ZV60\_000006\_000 Sub-assembly works orders and various fixes

#### Sub-assembly works orders and various fixes [x0221]

This service pack introduces the ability to create sub-assembly works orders to satisfy shortages of stock when entering a works order for a finished product that contains sub-assembly components.

#### Parameter maintenance [D17309]

Single location systems are still prompting for default locations in the locations parameter window.

#### Manufacturer Menu File

A new manufacturer menu file is included to integrate with the on-line help. After application of this service pack, the menu file MG-Menus should be copied from your Global 3000 program unit to the unit where your manufacturer data is held.

#### Post Application Text

This service pack must be applied in conjunction with ZM60\_000073\_000 which must be applied seperately.

ZV60\_000007\_000 Two enhancements and various fixes

Two enhancements and various fixes

Trial kitting report/enquiry

The option to print or display in-progress works orders for the product being kitted has been added [17359].

The wrong component stock levels are calculated when performing consecutive trail kitting enquiries or reports that use the same components in the same session [17351].

The wrong quantity of components is being printed/displayed if the unit of the product being kitted is changed from the default stock unit [17348].

Issue components

Wrongly sized border displayed on window [17358].

Wrong cost price calculated when unit cost price calculated as less than 0.01p [17355].

New parameter to force the batch and/or serial number windows to always be displayed prior to confirmation to allow additional checking before issuing components. This mirrors the confirmation process used in SOP [17354].

Installation

After installing Manufacturer, the dialogue that prompts you to create a new SQL database, incorrectly prompts you for a "PRD" unit assignment [17350].

Parameter Maintenance

Spelling mistake [17347].

ZV60_000008_000	Enhancement to allow product selection by barcode.
-----------------	--

Barcode Integration [GX16613]

This service pack contains an enhancement to Global 3000 distribution software which allows product code entry/selection to be made by scanning (or typing) a product s barcode.

The changes are:

Product maintenance has been updated so that as part of creating or maintaining a product a 40 character barcode can be specified.

Product code entry/selection has been updated to check to see if a barcode has been scanned (or typed) instead of a product code; it searches the product records for a product with a matching barcode and automatically selects it. Product code entry/selection can be made by scanning (or typing) a product's barcode at the product code prompts in the application functions:-

- Stock Control Transaction Entry,
- Stock Control Stock Take,
- Stock Requisition Entry,
- Purchase Order Entry,
- Purchase Invoice Input (the addition of services and extras),
- Purchase Order Processing Supplier/Product Maintenance,
- Sales Order Processing Transaction Desktop,
- Sales Order Entry,
- Manufacturer Works Order Entry,
- Product Enquiries,
- The standard product search.

Please note: Some barcode scanners supply the scanned barcode in upper or lower case depending on the state of <Caps Lock> key, to combat this barcodes will be held on file in upper case, and the applications always convert the scanned barcode into upper case before attempting to search for products with matching barcodes.

Please also note: Barcode scanners connected via the RS-232 serial port are not supported.

ZV60\_000031\_000 Update to Works Order Completion.

Works Order Completion [gx18299]

This service pack introduces a new option to Works Order Completion.

A new option labelled Allow write-offs during completion has been added to the Manufacturer - Completion system parameters along with an optional password to protect the new feature. If the "Allow write-offs during order completion" option is enabled and all components have been issued to the order, you may enter zero as the completed quantity within Works Order Completion to reduce the remaining quantity of the works order to zero and write-off any unused components.

In addition new options to record a Write-off profit centre and account have been added to the Manufacturer - GL Integration system

parameters. If the remaining quantity of a works order is written off during completion and costs are posted to General Ledger, the cost value of all unused components is posted to General Ledger as follows:

CR Work in progress account.  
DR Write-off account.

Please see the accompanying service pack note for further details.

----	----	-----

ZV60\_000032\_000 Update to Works Order Entry.

Works Order Entry [GX17674]

Works Order Entry has been updated to allow the quantity to be manufactured to be changed, when amending an existing works order.

Any attempt to reduce or increase the quantity of finished items being manufactured refers back to the current assembly bill for the product. If any components in the current assembly bill do not appear on the works order, the quantity to be manufactured cannot be amended.

When the quantity is changed, the system works out the number of each component required using the current assembly bill and moves this to the first line on the works order for that component.

It should be noted that if the quantity is changed any manual changes to component quantities are not retained.

The quantities of works orders created for sub-assemblies are also updated to reflect the quantity amendment.

The quantity to be manufactured cannot be reduced below the quantity that has already been completed.

Issued stock (not used to complete finished products) must be returned before the quantity to be manufactured is reduced, this restriction is not relevant when the quantity to be manufactured is increased.

Please see the accompanying service pack note for further details.

ZV60\_000033\_000 Update to Allocation.

Manufacturer - Allocation [gx18407]

This service pack introduces a new setting within Manufacturer System Parameters labelled Allow over-allocation of component stock . When set works order lines can be both manually and automatically over-allocated even when there is insufficient component stock.

Please note, serialised, batch tracked and queued products cannot be over-allocated.

Please also note, when a component product is over-allocated its free stock level will become negative, however Manufacturer does not allow over-allocated component stock to be issued (even in systems configured to permit negative free stock).

Please see the accompanying service pack note for further details.

ZV60\_000036\_000 Update to Manufacturer Bill of Materials.

Manufacturer - Component Wastage [gx18489]

Global 3000 Manufacturer operates on the basis that the component quantity specified in the assembly bill includes any wastage that may occur during the manufacturing process. This service pack introduces a

new setting within Product Maintenance - Assembly Bills to allow user to specify the percentage of the component quantity that is wastage. This percentage is then shown on enquiries and reports.

Please see the accompanying service pack note for further details.

#### Manufacturer - Trial Kitting [D18250]

The trial kitting enquiry and report have been updated to show the estimated cost of components (if the system setting to display costs in order entry is set).

Please see the accompanying service pack note for further details.

ZV60\_000053\_000 New 'Where Used' Report.

Where Used Report [gx18426]

This service pack introduces a new function named Where Used Report which is available from the Product Maintenance Menu within Sales Order Processing, Stock Control, Purchase Order Processing and Manufacturer.

The new report is only available in PDF format and shows details of which product s accessory lists and assembly bills a product appears in. Products included in the report can be selected by location, product group and/or product range.

Please see the note accompanying this service pack for full details of the new feature.

Please note, Delivery of documents via email and printing documents in PDF format requires an up-to-date copy of either PDF\_In\_The\_Box or All\_In\_The\_Box to be present on each GX client used to perform the document generation.

Please copy SO-Menus, PO-Menus, MG-Menus and ST-Menus from your program unit (\$P) to your data unit (STD or MGD) after applying this Service Pack. This step is not required if service pack ZM60\_000080\_000 has been applied and unit 'G3M' has been assigned to your program unit (\$P).

ZV60_000056_000	Multiple Bin Handling
-----------------	-----------------------

Multiple Bin Handling [gx10667]

Please note, the features described in the following text (and accompanying service pack note) are not yet available, they are currently undergoing testing and quality control and will be enabled in a later service pack.

This service pack introduces the ability to operate multiple bins per stock location.

Please note, the following features are only available at sites configured to use the extension database (see service pack ZM60\_000259\_000 for details).

The distribution options within system parameters have been updated to include a new option labelled Multiple Bin Handling . This will provide configuration options for controlling the use of multiple bins throughout the distribution modules.

Stock transactions (issues, receipts, returns, adjustments and transfers) have been updated to take in to account bin numbers for all stocked products (not just those that are batch tracked).

A new button labelled Zones has been added to location maintenance. Zones are used to sub-divide stock locations. For example in to aisles. Stocktakes can be limited to products held within bins situated at specific zones of a stock location.

A new option labelled Bin Maintenance has been added to the system maintenance menu within Stock Control. This allows bins to be created, updated and their contents to be manipulated.

A new option labelled Bin Enquiries has been added to the product enquiry menu. This allows enquiries upon bins, their contents and bin movements.

A new option labelled Bin Reporting has been added to the Reporting menu (within Stock Control). Note, this report is only available in PDF format.

All places within Stock Control, SOP, POP and Manufacturer that issue, receive, adjust or transfer stock have been updated to update quantities recorded within bins where applicable.

Please see the accompanying service pack note for further details.

Please note, printing documents in PDF format requires an up-to-date copy of either PDF\_In-The-Box or All\_In\_The\_Box to be present on each GX client used to perform the document generation.

Please copy ST-Menus from your program unit (\$P) to your data unit (STD) after applying this Service Pack. This step is not required if service pack ZM60\_000080\_000 has been applied and unit 'G3M' has been assigned to your program unit (\$P).

ZV60\_000058\_000 Manufacturer - Multiple Methods of Manufacture.

Manufacturer Multiple Methods of Manufacture [gx18808]

---

This service pack introduces a new setting within Manufacturer System Parameters (Order Entry) labelled Multiple methods of manufacture?. When the new option is set methods of manufacture can be defined via a new option in the Manufacturer system maintenance menu.

Product maintenance then allows a separate assembly bill (per product) to be defined for each method of manufacture.

When entering a works order, the system prompts for the method of

manufacture to be used if the product has more than one method defined.

Please see the accompanying service pack note for further details.

ZV60\_000059\_000 Manufacturer - Manufacturing Stages.

Manufacturer Manufacturing Stages [gx18810]

---

This service pack introduces a new setting within Manufacturer System Parameters (Operating Options) labelled Use manufacturing stages?. A manufacturing stage is an individual step during the manufacturing process.

Manufacturing Stages can be defined via a new option labelled Manufacturing Stages available from the system maintenance menu. Manufacturing stages are identified by stage id and description, further descriptive text in the form of comments can then be assigned to the stage id and optionally included on the works order report.

Each component line within an assembly list can be assigned to one of the existing a manufacturing stages. On exit from the assembly list it is automatically re-sequenced by manufacturing stage (ensuring that works orders are generated, printed and picked in manufacturing stage sequence).

Please see the accompanying service pack note for further details.

ZV60\_000060\_000 Manufacturer - Decimal Places in Assembly Bills

Manufacturer Decimal Places in Assembly Bills [gx18823]

---

This service pack introduces new options within Manufacturer System Parameters (Operating Options) labelled Use a minimum number of decimal places in assembly bills and Minimum number of decimal places in assembly bills .

When entering component quantities in assembly bills with the new settings configured, the number of decimal places that can be entered is the higher of the number specified in the new setting, and that specified for the component.

Please note, if the new settings are in use then component quantities in all assembly bills must be expressed in stock units.

Please see the accompanying service pack note for further details.

ZV	60	71
----	----	----

This GSP is part of the following Group

ZV60\_000075\_000 Problems in Allocation and Completion.

Manufacturer Allocation/Completion [D19511/D19512]

---

This service pack solves the following two problems.

In some cases partially completing a works order that contains a line for a service product with a zero remaining quantity results in the program terminating with an EXIT 17001.

In some cases when using the Allocate All option within allocation a Units in Error message is displayed if works orders for multiple unit groups exist.
